Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1, 2019 to December 31, 2019.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

This Specialized Disclosure Report on Form SD (the "Form SD") of Omnicell, Inc. ("Omnicell" or the "Company") is filed pursuant to Rule 13p-1 promulgated under the Securities Exchange Act of 1934, as amended, for the reporting period January 1, 2019 to December 31, 2019.

A copy of Omnicell's Conflict Minerals Report is provided as Exhibit 1.01 to this Form SD, is hereby incorporated by reference herein, and is publicly available on the Company's website at <http://ir.omnicell.com/financial-information/sec-filings>.

Item 1.02 Exhibit

As specified in Section 2, Item 2.01 of this Form SD, the Company is hereby filing its Conflict Minerals Report as Exhibit 1.01 to this report.

Section 2 - Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit No.	Description
1.01	<u>Conflict Minerals Report of Omnicell, Inc. for the reporting period from January 1, 2019 to December 31, 2019</u>

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, as amended, the Registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

**Conflict Minerals Report of Omnicell, Inc. for the reporting period from
January 1, 2019 to December 31, 2019**

Introduction

This Conflict Minerals Report (the “Report”) of Omnicell, Inc. (“Omnicell” or the “Company”) has been prepared pursuant to Rule 13p-1 (the “Rule”) under the Securities Exchange Act of 1934, as amended (the “Exchange Act”), for the reporting period from January 1, 2019 to December 31, 2019 (the “Reporting Period”).

The Rule requires disclosure of certain information when a company manufactures or contracts to manufacture products and the minerals specified in the Rule are necessary to the functionality or production of those products. The specified minerals, which the Company collectively refers to in this Report as “Conflict Minerals,” are gold, columbite-tantalite (coltan), cassiterite and wolframite, including their derivatives, which are limited to tantalum, tin and tungsten. The “Covered Countries,” for the purposes of the Rule and this Report, are the Democratic Republic of the Congo (“DRC”) and each adjoining country. Certain other terms in this Report are defined in SEC Release No. 34-67716 issued by the Securities and Exchange Commission (“SEC”) on August 22, 2012, and the reader is referred to those sources for such definitions.

Company and Product Overview

Omnicell is headquartered in the United States with a small number of operations offices located globally. The Company is a provider of medication management automation solutions and adherence tools for healthcare systems and pharmacies. The Company’s product offerings help enable healthcare providers to improve patient safety, increase efficiency, lower costs, tighten regulatory compliance and address population health challenges.

This Report relates to products: (i) for which Conflict Minerals are necessary to their functionality or production; (ii) that were manufactured, or contracted to be manufactured, by the Company; and (iii) for which the manufacture was completed during calendar year 2019. These products, which are referred to in this Report collectively as the “Covered Products,” are the following: secure dispensing systems; storage, retrieval and packaging systems; supply management systems; pharmacy sealers; sterile compounding solutions; semi-automated filling equipment and pharmacy-automated systems for medication packaging.

As a “downstream” purchaser of products or components that contain Conflict Minerals, the Company is at the end of a very long supply chain where it manufactures or contracts to manufacture products and does not directly source Conflict Minerals from mines, smelters or refiners nor specifically design Conflict Minerals into its products.

Reasonable Country-of-Origin Inquiry

The Company identified the following categories of suppliers that it reasonably believed represent the highest risk of providing products or components potentially containing Conflict Minerals: original equipment manufacturers, contract manufacturers, and electromechanical and metals suppliers (including off-the-shelf suppliers). Based on these criteria, the Company reviewed its list of suppliers for Covered Products the manufacture of which was completed in 2019 and determined that 33 suppliers fell within scope. For those 33 suppliers, the Company conducted a good faith, reasonable country-of-origin inquiry (“RCOI”) regarding the Conflict Minerals that were necessary to the functionality or production of the Covered Products (the “necessary Conflict Minerals”). The RCOI was reasonably designed to determine whether any of the necessary Conflict Minerals originated in the Covered Countries and whether any of the necessary Conflict Minerals may have been from recycled or scrap sources. To that end, these suppliers were contacted and asked to complete the Conflict Minerals Reporting Template (“CMRT”) developed by the Responsible Minerals Initiative (“RMI”). With the assistance of its third-party consultant, the Company reviewed and analyzed the quality of the responses and assessed the risk level of these suppliers. Of the 33 suppliers contacted, 97% responded to the request, with 91% (or 30 suppliers) providing CMRTs and 6% (or two suppliers) providing a company policy or declaration in lieu of a completed CMRT. One supplier returned a CMRT without completing any supplier-specific information, which the Company is not including as a “responsive” supplier.

Design of Due Diligence

The Company’s due diligence measures have been designed to conform, in all material respects, to the internationally recognized due diligence framework in The Organisation for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chain of Minerals from Conflict-Affected and High Risk Areas: Third Edition, including the related supplements on gold, tin, tantalum and tungsten (the “OECD Guidance”), consistent with the Company’s position in the minerals supply chain as a downstream purchaser. The scope of the Company’s due diligence remained on Conflict Minerals - namely tin, tantalum, tungsten and gold.

Description of Due Diligence Measures

The Company’s due diligence measures performed with respect to Covered Products for the Reporting Period included the following:

1. OECD Step 1 – Establish Strong Company Management Systems

- *Conflict Minerals policy.* The Company’s Conflict Minerals policy was communicated to in-scope suppliers during the Reporting Period and is posted on its external website at: <https://www.omnicell.com/about-us/social-responsibility>.
- *Conflict Minerals team.* A cross-functional team comprised of individuals from the Company’s supplier quality department across various sites and the legal department is responsible for implementing various aspects of its Conflict Minerals program and reporting to the executive team as needed to provide updates regarding the Company’s Conflict Minerals program.

- *System of controls and transparency.* The Company maintains a Conflict Minerals Due Diligence Handbook integrated within its quality management systems as a standard operating procedure, as well as an electronic database for collecting and retaining supplier responses and other information necessary to support its Conflict Minerals inquiry and reporting.
- *Strengthen engagement with suppliers.* In addition to the initial outreach to in-scope suppliers directing suppliers to the Company's Conflict Minerals policy and requesting that they complete the CMRT, the Company communicates its risk analysis review findings to selected suppliers the Company considers to have an ineffective conflict minerals program based on a review of completed CMRTs, and follows up with these suppliers regarding incomplete or inconsistent responses (through quarterly business reviews or other means). As the Company has entered into new contracts, or as contracts renew, the Company has also included Conflict Minerals-related provisions in its contracts with direct suppliers regarding responsible sourcing and related reporting requirements.
- *Grievance mechanism.* The Company's publicly available Conflict Minerals policy directs suppliers and other stakeholders to report any questions or concerns about the policy by emailing the Company at conflictminerals@omnicell.com.

2. OECD Step 2 – Identify and Assess Risk in the Supply Chain

To identify risk in its supply chain, the Company relied on its suppliers to provide information on the presence, use, source and chain of custody of the Conflict Minerals contained in supplier products or components included in the Covered Products by requesting that in-scope suppliers complete the CMRT. With the assistance of its third-party consultant, the Company reviewed suppliers' completed CMRTs. The Company continues to follow up (through quarterly business reviews or other means) with selected suppliers it considers to have an ineffective conflict minerals program based primarily on a review of plausibility, consistency and gaps in information provided in their completed CMRTs, as well as sourcing practices and policies, in addition to the three suppliers that did not provide completed CMRTs. The Company's consultant compared the names of smelters and refiners listed by suppliers in completed CMRTs against lists published by the RMI and the U.S. Department of Commerce to verify that the identified facilities are known metal processors. The Company's consultant also compared the identified smelters and facilities against lists published by the Responsible Minerals Assurance Process ("RMAP"), developed by the RMI, of smelters and refiners that have been certified as conflict-free (i.e., conformant with RMAP assessment protocols) or that are "active" in the RMAP process (i.e., they have agreed to participate in the RMAP but the audit process has not yet been completed).

3. OECD Step 3 – Design and Implement a Strategy to Respond to Risk

The Company has developed a strategy for addressing supply chain risks identified in the course of its due diligence, including where suppliers do not cooperate or ultimately, notwithstanding encouragement from the Company, do not source from smelters or refiners that have been certified as conflict-free by the RMAP. This risk-mitigation strategy includes, with respect to suppliers the Company considers to have an ineffective conflict minerals program based on a review of completed CMRTs, cautioning the supplier, providing additional education and other corrective actions, giving the supplier an opportunity to address the risks, monitoring and tracking performance (through the incorporation of Conflict Minerals requirements into the Company's contracts with direct suppliers as well as its quarterly business review and scoring process with in-scope suppliers) and escalating issues to management as appropriate. If such a supplier is unable to source from smelters or refiners that have been

certified as conflict-free, the Company will need to review the risk on a case-by-case basis and determine proper strategies, such as alternate sourcing, if reasonably available.

4. OECD Step 4 – Independent Third-Party Audit of Smelter/Refiner’s Due Diligence Practices

As a downstream purchaser, the Company relies on the RMAP to perform independent third-party audits of the smelters and refiners within its supply chain. The Company encourages its suppliers to implement responsible sourcing, in particular, to use Conflict Minerals only from smelters or refiners that have been certified as conflict-free through the RMAP.

5. OECD Step 5 – Report on Supply Chain Due Diligence

The Company expects to report annually, to the extent required by the Rule, and has posted its Form SD containing this Report on its website at: <http://ir.omnicell.com/financial-information/sec-filings>.

Results of Due Diligence Performed

The due diligence measures described above revealed the following:

- As discussed above, of the 33 in-scope suppliers reviewed for the Reporting Period, 97% responded to the request to complete a CMRT, with 30 suppliers providing CMRTs with detailed information, and two suppliers providing a company policy or declaration in lieu of a completed CMRT. One supplier returned a CMRT without completing any supplier-specific information, which the Company is not including as a "responsive" supplier.
- The Company believes this response rate of in-scope suppliers indicates that its Conflict Minerals program generally continues to be more widely accepted among its suppliers and manufacturers than in the initial years of the program.
- Of the 30 suppliers that provided a CMRT, 18 suppliers reported having Conflict Minerals in their products. Of these 18 suppliers, 12 suppliers were considered to have an ineffective conflict minerals program based primarily on a review of plausibility, consistency and gaps in information provided in their completed CMRTs, as well as sourcing practices and policies. The Company followed up with certain of these suppliers, in addition to the three suppliers that did not provide completed CMRTs, through quarterly business reviews or other means.

During the Reporting Period, the Company re-examined its policy regarding the timing of future supplier training and on-site assessments performed by its third-party consultant. As a result, the Company did not provide training or conduct any on-site assessments of suppliers through its third-party consultant as planned during the Reporting Period, but anticipates doing so commencing as early as 2021.

Identified Smelters and Refiners

The Company has listed on Appendix 1 the smelters and refiners identified by its suppliers in completed CMRTs as a result of the Company’s RCOI and due diligence. Out of the 17 suppliers that provided CMRT smelter lists, six provided the smelters at the product or similar level (*i.e.*, they provided information for the particular types

of products and components they supplied to the Company) and 11 provided smelters at the company level (*i.e.*, they provided information regarding all Conflict Minerals used in every component and product they manufacture rather than responses specific to the types of products and components used in the Covered Products). As a result, some of the smelters and refiners reported to the Company and identified on Appendix 1 may not actually have been used to process the necessary Conflict Minerals in the Covered Products.

Identified Countries of Origin

The Company does not have sufficient information to reliably determine the countries of origin of all of the necessary Conflict Minerals in the Covered Products given that certain suppliers provided inconsistent or incomplete responses or provided information at the company level. However, based on information provided by the Company's in-scope suppliers in completed CMRTs, the Company believes that the countries of origin may include the countries listed on Appendix 2. As discussed above, because some suppliers provided information at the company level, there may be countries of origin identified on Appendix 2 that are not the countries of origin of the necessary Conflict Minerals actually included in the Covered Products.

Efforts to Determine Mine or Location of Origin

The Company's efforts to determine the mines or locations of origin included the use of the due diligence measures described above.

Future Due Diligence and Risk Mitigation Measures

As the Company further develops its Conflict Minerals program, the Company intends to take the following steps to further enhance its due diligence measures and to mitigate the risk that, with respect to any of the Covered Products, necessary Conflict Minerals were used, directly or indirectly, to finance or benefit armed groups in the Covered Countries:

- Continue to communicate risk analysis review findings to certain suppliers the Company considers to have an ineffective conflict minerals program based on a review of completed CMRTs, through quarterly business reviews and other means, in order to improve the accuracy and completeness of and mitigate issues with suppliers' CMRT responses;
- Continue to encourage its suppliers to implement responsible sourcing by using Conflict Minerals only from smelters or refiners that have been certified as conflict-free through the RMAP;
- Continue to utilize a third-party consultant to review completed CMRTs from suppliers and prepare the related risk assessment; and
- Provide training in future years to certain suppliers the Company considers to have an ineffective conflict minerals program based on a review of completed CMRTs during prior years, and select several of these suppliers to undergo an on-site assessment, to be performed by the Company's third-party consultant, of the CMRT information provided by these suppliers. The objective of the assessment would be to improve comprehension and performance for the following reporting period. The Company anticipates providing such training and conducting such assessments commencing as early as 2021.

Inherent Limitations on Due Diligence Measures

The Company's supply chain with respect to the Covered Products is complex, and its procurement and manufacturing process is significantly removed from the sourcing, mining, smelting and refining of Conflict Minerals. As a result, the Company does not have direct contractual relationships with smelters, refiners or mines, and there are many third parties in the supply chain between the ultimate manufacture of the Covered Products and the original sources of Conflict Minerals. Moreover, the Company believes that the smelters and refiners of the Conflict Minerals are best situated to identify the sources of Conflict Minerals and, therefore, has taken steps to identify the applicable smelters and refiners of necessary Conflict Minerals in the Company's supply chain using the CMRT. However, tracing these minerals to their sources is a challenge that requires the Company to rely on its direct suppliers in its efforts to achieve supply chain transparency, including obtaining information regarding the origin of the necessary Conflict Minerals. The information provided by suppliers or third-party consultants or auditors may be inaccurate or incomplete or subject to other irregularities. In addition, because of the Company's relative location within the supply chain in relation to the actual extraction and transport of Conflict Minerals, its ability to verify the accuracy of information reported by suppliers is limited.

Cautionary Note on Forward-Looking Statements

Forward-looking statements in this Report are made pursuant to the safe harbor provisions of Section 21E of the Exchange Act, and other federal securities laws. Investors are cautioned that statements in this Report that are not strictly historical statements, including without limitation, the Company's intentions and expectations regarding further supplier engagement, future supplier audits and assessments and the timing thereof, future due diligence and risk mitigation efforts, strategy and future reporting, constitute forward-looking statements that involve risks and uncertainties. Words such as "expects," "anticipates," "targets," "goals," "projects," "intends," "plans," "believes," "seeks," "estimates," "evaluates," variations of these words, and similar expressions are intended to identify such forward-looking statements. Actual results could differ materially from the forward-looking statements. Risks and uncertainties that could cause actual results to differ include, without limitation, risks and uncertainties associated with the progress of industry and other supply chain transparency and smelter or refiner validation programs for Conflict Minerals (including the possibility of inaccurate information, fraud and other irregularities), inadequate supplier education and knowledge, limitations on the ability or willingness of suppliers to provide more accurate, complete and detailed information and limitations on the Company's ability to verify the accuracy or completeness of any supply chain information provided by suppliers or others, the impact on the Company and its suppliers of public health crises such as the ongoing global coronavirus (COVID-19) pandemic, as well as the possibility of future regulatory changes.

The Company has provided information as of the date of this Report, and undertakes no obligation to revise or update any forward-looking statements for any reason. Subsequent events, such as the inability or unwillingness of any of our suppliers, smelters or refiners to comply with Omnicell's Conflict Minerals policy, may affect its future disclosures and determinations under the Rule. In addition, the Company's due diligence and reporting obligations under the Rule may change in the future and its ability to implement certain processes or obtain information from its suppliers may differ materially from those anticipated or implied in this Report.

Appendix 1
Identified Smelters and Refiners

Based on the information that was provided by the Company's suppliers in completed CMRTs, the Company believes that, to the extent reasonably determinable by the Company, the facilities that may have been used to process the necessary Conflict Minerals contained in the Covered Products included the smelters and refiners identified below. However, as noted above, where the Company's suppliers provided information on a division- or company-wide basis regarding all Conflict Minerals used in every component and product they manufacture rather than responses specific to the types of products and components supplied to the Company for use in the Covered Products, the smelters and refiners reported to the Company by those suppliers may not actually have been used to process the necessary Conflict Minerals in the Covered Products.

* “**Yes**” means the smelter or refiner is conformant with RMAP assessment protocols as reported by the RMI. “**Active**” means the smelter or refiner is active in the RMAP process (i.e., it has agreed to participate in the RMAP but the audit process has not yet been completed). “**No**” means the smelter or refiner is a known metal processor based on information available from the RMI or the Department of Commerce but has not been certified as conflict-free through the RMAP and is not active in the RMAP process. “**No (Unknown)**” means the Company was unable to verify such facility as a known metal processor based on information available from the RMI or the U.S. Department of Commerce.

Appendix 2
Identified Countries of Origin

Angola	Luxembourg
Argentina	Madagascar
Armenia	Malaysia
Australia	Mali
Austria	Mexico
Belarus	Mongolia
Belgium	Morocco
Bermuda	Mozambique
Bolivia	Myanmar
Brazil	Namibia
Burundi	Netherlands
Cambodia	New Zealand
Canada	Niger
Central African Republic	Nigeria
Chile	Papua New Guinea
China	Peru
Colombia	Philippines
Czech Republic	Poland
Democratic Republic of the Congo	Portugal
Djibouti	Republic of the Congo
Ecuador	Russian Federation
Egypt	Rwanda
Estonia	Saudi Arabia
Ethiopia	Sierra Leone
Finland	Singapore
France	Slovakia
Germany	South Africa
Ghana	South Sudan
Guinea	Spain
Guyana	Suriname
Hong Kong	Sweden
Hungary	Switzerland
India	Taiwan
Indonesia	Tajikistan
Ireland	Tanzania
Israel	Thailand
Italy	Turkey
Ivory Coast	Uganda
Japan	United Arab Emirates
Jersey	United Kingdom
Kazakhstan	United States
Kenya	Uzbekistan
Korea, Republic of	Vietnam
Kyrgyzstan	Zambia
Laos	Zimbabwe
